Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Headbox market size was valued at US\$ 2582 million in 2025 and is forecast to a readjusted size of US\$ 3433 million by 2032 with a CAGR of 4.2% during review period.

The hydraulic headbox is required mainly for medium and high speed machines for fourdrinier applications. The consistency and speed range is reduced if compared with a pressurized headbox but the quality formation is increased. A conical header distributes uniformly the pulp to a three stages step diffuser that is the most technological component because induces to the pulp the micro-turbulences necessary for the fiber mixing and the defloculation effect. Depending of paper grade and quality requirements we can offer a plastic three stage step diffuser (the third step has a circular shape) or as per alternative a stainless steel tube bank were the third step has a square shape.
