## Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Outboard Propulsion Unit market size was valued at USD 10410 million in 2022 and is forecast to a readjusted size of USD 12530 million by 2029 with a CAGR of 2.7% during review period.

Hydraulic outboard propulsion units are self-contained thruster packages for main propulsion and positioning of barges, platforms and river craft. They are available with diesel or electric hydraulic drives with power ratings from 75hp (55kW) to 3,000hp (2250kW).

The marine propulsion engines market is driven by the need for faster, cleaner, and more fuel-efficient engines. The International Maritime Organization (IMO) has drawn up new rules to reduce the sulfur content in marine fuels from 3.5% to 0.5%. This new regulation is expected to reduce ship emissions by 77%. This development has prompted ship operators to reduce the sulfur content of fuels such as marine gas oil, thereby driving the demand for ship electrification. Currently, there are about 100,000 ocean-going commercial vessels sailing the oceans, each with an installed power of about 1 to 100 megawatts (MW). With very few exceptions, all of these vessels are diesel propulsion, most of them with direct drive systems, and some with diesel-electric propulsion or hybrid systems. Diesel engines are favored for marine propulsion applications due to their unrivaled power and torque ratings.
