## Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Power Units for Aircraft market size was valued at USD 23 million in 2023 and is forecast to a readjusted size of USD 39 million by 2030 with a CAGR of 8.2% during review period.

Hydraulic Power Unit – Hydraulic power units, sometimes called a hydraulic mule, provide hydraulic pressure to operate the aircraft systems during maintenance. They can be used to:

- Drain the aircraft hydraulic systems.
- Filter the aircraft system hydraulic fluid.
- Refill the aircraft system with clean fluid.
- Check the aircraft hydraulic systems for operation and leaks.

Operating at pressures of 3,000 psi or more, extreme caution must be used when operating hydraulic power units. At 3,000 psi, a small stream from a leak can cut like a sharp knife. Therefore, inspect lines used with the system for cuts, frays, or any other damage, and keep them free of kinks and twists. When not in use, hydraulic power unit lines should be stored (preferably wound on a reel) and kept clean, dry, and free of contaminants.

For the Hydraulic Power Units for Aircraft industry, the market is concentrated. Tronair, Hydraulics International, TEST-FUCHS, Aero Specialties, Hycom, Deshons
