Hydraulic pump station? is a device that converts mechanical energy into hydraulic energy and is mainly used to drive various mechanical equipment. It consists of main components such as power source (such as motor), fuel tank, hydraulic pump, control valve and hydraulic cylinder. The hydraulic pump station drives the oil pump to rotate through the motor, absorbs oil from the oil tank and pumps oil, converts the mechanical energy into the pressure energy of the hydraulic oil, and then adjusts the direction, pressure and flow through the control valve, and finally drives the hydraulic machinery to do work.
