## Abstracts

Hydraulic reach stacker is a common construction machinery equipment, also known as loader or loading shovel. It mainly consists of a barrel-shaped device for loading and unloading materials, driven by a hydraulic system. Hydraulic reach stackers are usually used in civil engineering, construction sites, mining sites and other sites to transport, load and unload various materials such as soil, gravel, sand and gravel, construction waste, etc. They usually have high carrying capacity and work efficiency, and can quickly complete a large amount of handling work. These loaders often have nimble steering and maneuverability, allowing them to operate in tight jobsite environments. They are also often equipped with safety guards to ensure the safety of the operator and those around them. Hydraulic reach stackers can come in different sizes and configurations to meet the needs of different working scenarios. They play an important role in modern construction and civil engineering, improving the efficiency and safety of construction site operations.
