According to our (Global Info Research) latest study, the global Hydraulic Release Shackle market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A hydraulic release shackle is a device used to lift and position structures, which may be underwater or on the surface. It is primarily used in areas where direct human intervention is difficult in order to secure or release connections safely. These devices are used to install and decommission offshore/onshore structures by allowing the remote release and engagement of lifting rigging from the structure being raised. As technology advances, hydraulic release shackles are moving towards higher automation, greater precision, and a wider range of applications. Future systems are likely to rely more heavily on artificial intelligence and machine learning technologies to improve the safety and efficiency of operations.
