## Abstracts

According to our (Global Info Research) latest study, the global Hydraulic Servo System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The hydraulic servo control system is based on the power provided by the motor, and uses a hydraulic pump to convert mechanical energy into pressure and push hydraulic oil. By controlling various valves to change the flow direction of hydraulic oil, the hydraulic cylinder is pushed to make actions in different strokes and directions, so as to complete the different action needs of various equipment. The hydraulic servo control system is divided into machine-hydraulic, electric-hydraulic, gas-hydraulic, etc. according to the different ways of obtaining and transmitting the deviation signal, among which the machine-hydraulic and electric-hydraulic control systems are more widely used.
