Hydraulic shears for excavators, also known as hydraulic demolition shears or hydraulic crushers, are equipment attachments designed for cutting and demolishing applications. These shears are specifically designed to be mounted onto excavators and use hydraulic power to deliver the cutting force.

Hydraulic shears utilize the hydraulic system of the excavator to generate high cutting forces, allowing them to cut through various materials including concrete, steel beams, rebar, and other structural elements. These attachments come in different sizes and configurations to fit different excavator models and job requirements. They can be used for surface demolition, building dismantling, and scrap metal processing. Hydraulic shears provide operators with precise control over the cutting process. They allow for accurate positioning and cutting, enabling the demolition of targeted sections without damaging the surrounding structures. Hydraulic shears are designed with safety features to protect the excavator operator and surrounding workers. These features typically include blade guards, hydraulic safety valves, and anti-locking mechanisms to prevent accidents and ensure safe operation.
