According to our (Global Info Research) latest study, the global Hydraulic Strut Pipe market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Hydraulic Strut Pipe is based on high-quality carbon structural steel, with one or several alloy elements appropriately added to improve the strength, toughness and hardenability of the steel. After this type of steel is made, it usually needs to undergo heat treatments such as quenching and tempering, chemical heat treatment, and surface quenching. Compared with high-quality carbon structural steel, it has good comprehensive mechanical properties. It is mostly rolled into round, square, and flat shapes of steel and used as important structural parts in machinery or machines.
