Hydraulic Submersible Trash Pump is a high-efficiency pump device driven by hydraulic power, specially designed for handling sewage and wastewater containing solid impurities, debris and high-viscosity liquids. Unlike traditional electric or diesel pumps, hydraulic submersible pumps are driven by an external hydraulic power source, with strong durability and flexibility, suitable for operation in remote and harsh environments. The device usually consists of a hydraulic drive unit, pump body, impeller and suction/discharge pipes, and can operate efficiently when fully submerged.
