According to our (Global Info Research) latest study, the global Hydro and Vacuum Excavator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A hydro and vacuum excavator is a specialized piece of equipment used in construction and utility maintenance for non-destructive digging. This excavator combines the capabilities of high-pressure water (hydro) and a vacuum system to safely and precisely excavate soil, debris, or other materials around sensitive underground utilities. The hydro excavation component uses pressurized water to break up the soil, creating a slurry that is then extracted by the vacuum system into a debris tank. This process allows for accurate excavation without damaging nearby pipes, cables, or other underground infrastructure. Hydro and vacuum excavators are particularly valuable in projects where traditional mechanical excavation methods may pose a risk to the integrity of underground utilities or when precision and minimal disturbance are essential.
