HPC catalysts are catalysts used in the hydro processing. Hydro processing is the name given to a series of chemical reactions that take place as part of oil refining, and include hydrocracking and hydrotreating. Hydro processing is necessary to remove pollutants like sulphur, nitrogen and heavy metals from fuel oils, as well as in the process of catalytic hydrocracking, where large hydrocarbon molecules are cracked into shorter ones that can be used as fuel oils.

This report studies the global Hydro-processing Catalysts production, demand, key manufacturers, and key regions.
