According to our (Global Info Research) latest study, the global Hydroacoustic Detector market size was valued at US\$ 322 million in 2024 and is forecast to a readjusted size of USD 429 million by 2031 with a CAGR of 4.2% during review period.

A hydroacoustic detector is a sensor based on acoustic principles, which is mainly used to detect the distance, depth and frequency of underwater objects, so as to accurately locate underwater targets. The hydroacoustic detector works by using the propagation characteristics of sound waves in water. When sound waves propagate in water, they will produce reflections, scattering and other phenomena when encountering different media or objects. By receiving and processing these sound wave signals, relevant information about underwater objects can be obtained.
