## Abstracts

According to our (Global Info Research) latest study, the global Hydrocarbon Environmental Solvent market size was valued at USD 1211.1 million in 2022 and is forecast to a readjusted size of USD 2067.9 million by 2029 with a CAGR of 7.9% during review period.

Hydrocarbon Based Cleaners are petroleum derivatives used for cleaning and or dissolving substances, and are used in a variety of industrial and consumer products. Hydrocarbon solvents are a diverse group of liquid complex mixtures. They may contain paraffinic, isoparaffinic, naphthenic and aromatic constituents. Most chlorinated cleaning agents can be replaced by hydrocarbon environmental cleaning agents. The main reason is that chlorinated cleaning agents are far more toxic and damaging to the environment than hydrocarbon eco-friendly cleaning agents, and many industrial cleaning applications do not require solvents with too strong a solvency. In these areas, hydrocarbon eco-solvents become an ideal alternative to chlorinated cleaning solvents.
