A hydrocarbon scrubber is a type of equipment used to remove hydrocarbons (organic compounds composed mainly of hydrogen and carbon) from gases or air streams, typically in industrial processes. These scrubbers are designed to capture and remove harmful pollutants, such as volatile organic compounds (VOCs), benzene, toluene, xylene, and other hydrocarbons, before the air or gas is released into the environment. Hydrocarbon scrubbers are commonly used in industries like oil and gas, chemical processing, refining, automotive emissions control, and petrochemical production.
