According to our (Global Info Research) latest study, the global Hydrocarbon Traps market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Hydrocarbon traps are mainly used for carrier gas purification in gas chromatography, and as the name suggests, they are mainly used to trap hydrocarbons. Some hydrocarbon traps contain carbon molecular sieves, which can also limit the elution of water and oxygen. During the installation of new gas cylinders, a large amount of moisture and oxygen will enter the hydrocarbon trap and slowly release, diluted by the clean carrier gas in the new gas cylinder. It specifically removes C3 and other higher hydrocarbons.
