A hydrocyclone is a filter or separator mechanism that uses centrifugal force to separate solids from liquids or even liquids of different consistencies.

A hydrocyclone will normally have a cylindrical section at the top where liquid is being fed , and a base. The angle, and hence length of the conical section, plays a role in determining operating characteristics.

Global Hydrocyclone key players include FLSmidth, Weir Minerals, KSB, etc. Global top three manufacturers hold a share about 35%.

Europe is the largest market, with a share over 50%, followed by North America and China, both have a share over 35 percent.

In terms of product, Solid-liquid Type is the largest segment, with a share about 45%. And in terms of application, the largest application is Mining, followed by Adiponitrile, Oil & Gas, etc.
