The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Hydrogen alcohol generator, also known as hydrogen alcohol fuel cell, is a device that generates electricity by combining hydrogen and alcohol (usually methanol) in the fuel cell. Fuel cells use the chemical reaction between hydrogen and alcohol to generate electricity. Water and carbon dioxide are the only by-products. Hydrogen-alcohol generator is a kind of fuel cell, which is a clean and efficient substitute for traditional fossil fuel generator. They can be used to generate electricity for a range of applications, including off-grid homes, remote areas and emergency standby power. The use of methanol in the generator can achieve a compact and efficient design, and the hydrogen component can provide clean and sustainable energy. However, the use of methanol does bring some safety problems, because it is highly flammable and toxic if ingested or inhaled. Therefore, correct handling and storage procedures must be followed.
