Hydrogen bicycle, also known as fuel cell bicycle, is a kind of bicycle that uses hydrogen fuel cell to generate electricity and provide power for electric motor. Fuel cells combine hydrogen and oxygen in the air to generate electricity, and water vapor is the only by-product. Hydrogen bicycles are a clean and efficient alternative to traditional gasoline powered bicycles because they do not produce emissions and have a longer range than battery-powered electric bicycles. They are also quieter than gasoline powered bicycles, and their fuel cells can be refueled in a few minutes.
