## Abstracts

According to our (Global Info Research) latest study, the global Hydrogen Bus market size was valued at US\$ 1549 million in 2025 and is forecast to a readjusted size of US\$ 3390 million by 2032 with a CAGR of 11.1% during review period.

In 2025, global Hydrogen Bus production reached approximately 13,205 units, with an average global market price of around US\$ 113,974 per unit. Gross margin is about 45%. The cost is 62,686 usd per unit, the production is 24,000 units. A Hydrogen Bus is a public transportation vehicle that utilizes hydrogen fuel cell technology to generate electricity and power its electric motor. These buses are designed to operate in urban areas, providing clean and efficient transportation options for city residents.

Continuous technological iteration and upgrading. The power, service life and low-temperature resistance of fuel cells are steadily improved, and on-board hydrogen storage develops toward high pressure, light weight and liquid hydrogen.

The overall industrial cost drops rapidly. Mass production reduces the cost of complete vehicles, core components and green hydrogen, making the total operating cost close to traditional fuel buses.

Hydrogen infrastructure is gradually improved. The hydrogen refueling station network is continuously expanded, and the integrated coordination of vehicles, hydrogen energy and stations guarantees commercial application.

Application scenarios are further expanded, covering urban public transport, intercity passenger transport, transportation hubs, industrial parks, cold and high-altitude areas.

Low-carbon advantages are highlighted. The proportion of green hydrogen increases to realize full-life carbon reduction and meet the requirements of green transportation and carbon neutrality policies.

Deeply integrated with intelligent connected technology, equipped with intelligent driving, hydrogen safety monitoring and V2X systems, transforming into smart and low-carbon public transport.
