Hydrogen energy buses, also known as hydrogen fuel cell buses, are a new type of bus that uses hydrogen as an energy source. They generate electrical energy through a chemical reaction between hydrogen and oxygen in a fuel cell to drive the motor, as the power source for vehicle propulsion. The working principle of hydrogen energy buses does not involve combustion, hence there is no mechanical loss and the energy conversion is efficient. Additionally, the byproducts are only electricity, heat, and water vapor, achieving zero-emission and non-polluting.
