A loader (commonly known as a forklift) is a type of earthwork construction machinery widely used in construction projects such as roads, railways, buildings, hydropower, ports, and mines. It is mainly used to shovel bulk materials such as soil, sand, lime, and coal, and can also perform light shoveling operations on ore and hard soil. By replacing different auxiliary working devices, it can also perform bulldozing, lifting, and loading and unloading operations of other materials such as wood. The hydrogen-powered electric loader uses hydrogen as a power source. It reacts chemically with oxygen in the fuel cell system to generate current. The only products are electricity, heat, and water, which effectively reduces air pollution caused by fuel and achieves zero carbon emissions.
