A hydrogen fuel van-type logistics vehicle is a van-style vehicle powered by hydrogen fuel, primarily used for logistics and transportation. It converts the chemical energy of hydrogen into mechanical energy through fuel cells or hydrogen internal combustion engines, providing power for the vehicle to move. The main body of the vehicle is designed in a van structure, featuring a closed cargo space used for loading goods. This design effectively protects the goods from external environmental factors such as rain, dust, and direct sunlight, ensuring the safety and integrity of the goods during transportation.
