Abstracts

According to our (Global Info Research) latest study, the global Hydrogen Phosphate market size was valued at US\$ 17794 million in 2025 and is forecast to a readjusted size of US\$ 26715 million by 2032 with a CAGR of 6.0% during review period.

Hydrogen Phosphate generally refers to phosphate species containing hydrogen, most commonly the hydrogen phosphate ion (HPO_4^{2-}) and its salts (e.g., disodium hydrogen phosphate, calcium hydrogen phosphate). It is an intermediate form in the phosphoric acid system ($\text{H}_3\text{PO}_4 \rightleftharpoons \text{H}_2\text{PO}_4^- \rightleftharpoons \text{HPO}_4^{2-} \rightleftharpoons \text{PO}_4^{3-}$) and plays a critical role as a buffering agent, nutrient source, and functional additive. The supply chain begins upstream with phosphate rock mining (fluorapatite) by major producers (e.g., Morocco, China, U.S.), followed by wet-process phosphoric acid production via sulfuric acid digestion. Midstream processing involves neutralization and controlled pH adjustment to produce hydrogen phosphate salts (e.g., Na_2HPO_4 , CaHPO_4), along with purification, crystallization, and drying. Downstream, hydrogen phosphate compounds are distributed into industries such as fertilizers (as phosphorus nutrients), food additives (buffering, emulsifying), water treatment (corrosion control), pharmaceuticals (tablet excipients, IV buffers), and detergents. The market is dominated by integrated phosphate chemical producers (e.g., OCP, Mosaic, Yuntianhua) alongside specialty chemical manufacturers that refine high-purity grades for food and pharma applications. In 2025, global Hydrogen Phosphate output was about 65 million tons with 85 million tons of capacity, average prices of USD 240-500 per ton, and gross margins around 18%.
