According to our (Global Info Research) latest study, the global Hydrogen Purification and Recovery market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Once the process of Hydrogen production is complete, the Hydrogen gas formed has to be purified so that it can be used for industrial purposes. Therefore, Hydrogen Purification is the next step. In this process, Catalytic Purification removes oxygen by reaction with hydrogen to form water. A mixture of gases is passed through a packed column of molecular sieves. Then, the hydrogen is absorbed, while the undesired particles are let out. The column is regenerated by the system, and the cycle continues.
