Abstracts

The global Hydrogen Purification and Recovery market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Once the process of Hydrogen production is complete, the Hydrogen gas formed has to be purified so that it can be used for industrial purposes. Therefore, Hydrogen Purification is the next step. In this process, Catalytic Purification removes oxygen by reaction with hydrogen to form water. A mixture of gases is passed through a packed column of molecular sieves. Then, the hydrogen is absorbed, while the undesired particles are let out. The column is regenerated by the system, and the cycle continues.
