Abstracts

According to our (Global Info Research) latest study, the global Hydrogenated Rosin market size was valued at USD 118.3 million in 2023 and is forecast to a readjusted size of USD 151.9 million by 2030 with a CAGR of 3.6% during review period.

Hydrogenated rosin is another type of rosin derivative that is produced by the hydrogenation of rosin. It is a chemical process in which rosin is reacted with hydrogen gas in the presence of a catalyst, typically a metal catalyst like nickel or palladium. The hydrogenation process leads to the saturation of some of the double bonds present in the rosin molecule, converting them into single bonds. This results in a product with reduced reactivity and altered physical properties.

The hydrogenation of rosin leads to the conversion of unsaturated resin acids into their saturated counterparts. As a result, hydrogenated rosin is more stable, less prone to oxidation, and has a higher melting point compared to regular rosin. The process also reduces the color and odor, making it more suitable for applications where color and odor are critical factors.

Hydrogenated rosin finds applications in various industries, including:

Adhesives: Hydrogenated rosin is commonly used in adhesive formulations to improve the stability and adhesion properties of the adhesive.

Inks: In the ink industry, hydrogenated rosin is used as a binder to enhance the ink's adhesion and printability.

Coatings: It can be used in coatings and varnishes to improve durability and reduce tackiness.

Electrical industries: Hydrogenated rosin is used in electrical insulation materials due to its stable and non-reactive nature.

Food and pharmaceuticals: In some cases, hydrogenated rosin may find applications in food and pharmaceutical products as a stabilizer or thickening agent.

As with any chemical product, the market for hydrogenated rosin can vary based on factors such as industrial demand, cost-effectiveness, and regulatory considerations. The market can be influenced by the growth of end-use industries, the availability of alternatives, and the development of new technologies.
