Hydrogenated Triethylene Glycol Ester is a chemical substance belonging to the ester class of compounds. It is a product obtained by esterifying triethylene glycol with an acid or anhydride and further hydrogenating it. This compound usually has the following characteristics:

Chemical structure:

The molecular structure of hydrogenated triethylene glycol ester contains the backbone of triethylene glycol and fatty acid chains connected by esterification. Hydrogenation can reduce the number of double bonds in the molecule, making the fatty acid chains more saturated, thereby changing its physical and chemical properties.

Physical properties:

Appearance: Usually a colorless or light yellow liquid.

Boiling point: Relatively high because of the large molecular weight and strong

intermolecular forces.
