## Abstracts

The global Hydrolyzed Lecithin market size is expected to reach \$ 2529 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Hydrolyzed lecithin is a functional phospholipid material made from natural lecithin through enzymatic or chemical hydrolysis of some phospholipid molecules to produce lysophospholipids and other components. It exhibits stronger hydrophilicity, dispersibility, and emulsification stability, and is widely used in the food, pharmaceutical, and cosmetic industries.

Upstream applications mainly include oilseeds such as soybeans, egg yolks, and sunflower seeds, as well as biological enzymes such as phospholipases. Downstream applications cover food and beverage emulsification ingredients, infant nutrition products, pharmaceutical excipients, cosmetics, and liposome delivery systems.

In 2025, the global hydrolyzed lecithin market price was \$7,780 per ton, with annual sales of approximately 216,000 tons, a global annual production capacity of 250,000 tons, and an industry profit margin of 25%.

This report studies the global Hydrolyzed Lecithin production, demand, key manufacturers, and key regions.
