Hydrolyzed sunflower lecithin is a modified form of lecithin derived from sunflower seeds. Lecithin is a naturally occurring phospholipid mixture found in various plant and animal tissues. Hydrolyzed sunflower lecithin undergoes a process called hydrolysis, where it is broken down into its constituent components using water or enzymes.

Hydrolyzed sunflower lecithin typically has a reduced molecular weight and improved solubility compared to regular sunflower lecithin. It is often used as an emulsifier, stabilizer, or dispersing agent in food and cosmetic products. It can improve the texture, consistency, and shelf-life of various formulations, helping to create stable emulsions and prevent ingredient separation.
