According to our (Global Info Research) latest study, the global Hydrometallurgical Resin market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Hydrometallurgical resin is a type of ion exchange resin that is used to extract, separate, and purify metals from aqueous solutions. Ion exchange resin is a porous polymer material that has functional groups attached to its backbone that can exchange ions with the solution. Hydrometallurgical resin can selectively bind to certain metal ions and release them when the resin is regenerated with an appropriate eluent.

Hydrometallurgical resin is widely used in the mining industry for the recovery of valuable metals such as copper, gold, nickel, cobalt, zinc, and rare earth elements.
