Abstracts

The global Hydrometallurgical Resin market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hydrometallurgical resin is a type of ion exchange resin that is used to extract, separate, and purify metals from aqueous solutions. Ion exchange resin is a porous polymer material that has functional groups attached to its backbone that can exchange ions with the solution. Hydrometallurgical resin can selectively bind to certain metal ions and release them when the resin is regenerated with an appropriate eluent. Hydrometallurgical resin is widely used in the mining industry for the recovery of valuable metals such as copper, gold, nickel, cobalt, zinc, and rare earth elements.
