Hydrophilic medical device coatings refer to surface treatments applied to medical devices to enhance their compatibility with aqueous (water-based) environments. The term 'hydrophilic' implies an affinity for water, and these coatings are designed to attract and retain moisture, making the surfaces of medical devices more wettable and less prone to friction.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
