## Abstracts

The global Hydrophobic Acrylic Aspheric Intraocular Lens market size is expected to reach \$ 5426 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2025, global Hydrophobic Acrylic Aspheric IOL production reached approximately 3,553 million Pcs, with an average global market price of around US\$102 per Pcs. An Intraocular Lens (IOL) is a lens implanted in the eye usually as part of a treatment for cataracts or for correcting other vision problems such as short sightedness and long sightedness, a form of refractive surgery. The main body and the supporting part of the hydrophobic acrylate aspheric intraocular lens are made of hydrophobic acrylate material. Aspheric IOLs are monofocal lenses that correct for spherical aberration. The result is a lens that will provide better overall vision than traditional IOLs, especially at night. Patients who choose an aspheric IOL can expect: Improved contrast sensitivity. According to reports by the World Health Organization, cataract is the leading cause of blindness worldwide, accounting for 39% of global blindness and 25% of severe visual impairment. It affects approximately 18 million blind individuals and leaves around 100 million people in need of surgical treatment, highlighting the substantial global burden of cataract. This burden continues to drive the development of the intraocular lens (IOL) market, making cataract surgery one of the most cost-effective ophthalmic interventions globally.

Hydrophobic acrylic aspheric intraocular lenses (IOLs) constitute a critical segment of the global premium IOL market. Owing to the excellent biocompatibility of hydrophobic acrylic materials, their relatively low incidence of postoperative posterior capsular opacification (PCO), and the superior visual quality enabled by aspheric designs?particularly under mesopic or low-light conditions?these lenses have become one of the mainstream advanced technology options in cataract refractive surgery. Current development trends are mainly reflected in two aspects. First is technological

integration and premiumization, whereby this platform is combined with toric designs (for astigmatism correction) and multifocal or extended depth of focus (EDoF) technologies (for presbyopia correction), forming comprehensive solutions tailored to individualized patient needs. Second is optimization of the surgical workflow, such as the adoption of preloaded injector systems to improve surgical efficiency and safety. The core market opportunity lies in continuously growing clinical demand. Global population aging is the fundamental driver, directly expanding the cataract patient base while simultaneously increasing demand for presbyopia correction. In parallel, patients worldwide are placing higher expectations on postoperative vision and quality of life, driving an upgrade in demand from 'being able to see' to 'seeing well and comfortably'.

Key restraining factors include the high product cost, which limits penetration in regions with constrained reimbursement systems—particularly in emerging markets; the learning curve for surgeons and the need for continuous improvement in planning, implantation, and postoperative management of complex functional IOLs; and ongoing technological competition from alternative materials (such as hydrophilic acrylic) or emerging designs (such as diffractive aspheric lenses).

This report studies the global Hydrophobic Acrylic Aspheric Intraocular Lens production, demand, key manufacturers, and key regions.
