The global Hydrophobic Melamine Foam market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hydrophobic Melamine Foam is a specialized foam material treated with a hydrophobic coating, making it resistant to water absorption. Its properties of thermal insulation, acoustic absorption, and water repellency make it suitable for various applications across industries where these characteristics are desired, including construction, automotive, electronics, and more.

Hydrophobic Melamine Foam is a specialized foam material known for its unique properties, primarily its hydrophobic or water-repellent nature. It is a type of open-cell foam made from melamine resin, which is a synthetic polymer known for its excellent thermal and acoustic insulation properties. The hydrophobic treatment applied to the foam surface imparts water-repelling characteristics, making it resistant to water absorption and allowing it to repel liquids.
