According to our (Global Info Research) latest study, the global Hydrophobically Modified Alkali-Soluble Emulsions market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Hydrophobic modified anionic soluble emulsion is a large class of combined thickeners, liquid (milk), concentration 30%, anionic, pH 2.5 to 3.5, pseudoplastic. Associate with the hydrophobic groups of other components to form a high viscosity, Newtonian fluid with a wide range of rheological control and a greater range of shear rate control than traditional ASE-type synthetic polymers. With a variety of models, it is convenient to develop high, medium, low and various shear rate products. HASE thickener has excellent anti-splash ability and can be used in combination with other types of thickeners.
