## Abstracts

The global Hydrophobically Modified Alkali-Soluble Emulsions market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Hydrophobic modified anionic soluble emulsion is a large class of combined thickeners, liquid (milk), concentration 30%, anionic, pH 2.5 to 3.5, pseudoplastic. Associate with the hydrophobic groups of other components to form a high viscosity, Newtonian fluid with a wide range of rheological control and a greater range of shear rate control than traditional ASE-type synthetic polymers. With a variety of models, it is convenient to develop high, medium, low and various shear rate products. HASE thickener has excellent anti-splash ability and can be used in combination with other types of thickeners.
