## Abstracts

According to our (Global Info Research) latest study, the global Hydrophone Calibrator market size was valued at US\$ 42.48 million in 2025 and is forecast to a readjusted size of US\$ 84.8 million by 2032 with a CAGR of 10.5% during review period.

A hydrophone calibrator is a special device used to quickly calibrate the sensitivity of a hydrophone under non-free field conditions. A hydrophone is a transducer that converts underwater acoustic signals into electrical signals, and a hydrophone calibrator is an important tool to ensure that the hydrophone can accurately measure sound pressure. Before using a hydrophone for quantitative research on the sound field or underwater acoustic signal measurement, it must be calibrated to obtain its sound pressure sensitivity. The sound pressure sensitivity parameter is defined as the ratio of the output voltage to the received sound pressure, and this parameter is crucial to ensuring the accuracy of the measurement results.
