Hydropneumatic Fender is a ship berthing protection device that combines hydraulic and pneumatic technologies. Its structure is usually composed of air bags containing air and liquid. When the ship approaches the dock or other ships, it can effectively absorb the impact energy and prevent damage to the ship and dock facilities. The Hydropneumatic Fender adopts a combination of liquid and gas. By adjusting the pressure of air and liquid, the fender has efficient buffering capacity and can meet the berthing needs of various ships.
