Abstracts

Hydroponics is a subset of hydroculture, the method of growing plants without soil, using mineral nutrient solutions in a water solvent. Terrestrial plants may be grown with only their roots exposed to the mineral solution, or the roots may be supported by an inert medium, such as perlite or gravel. The nutrients in hydroponics can come from an array of different sources; these can include but are not limited to byproduct from fish waste, duck manure, or commercial fertilisers.

Scope of the Report:

This report focuses on the Hydroponics in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In commercial hydroponic production, the primary hydroponic system used is the aggregate hydroponic system as most of the majorly used hydroponic growth techniques are a part of this system.

Europe has traditionally been at the forefront of implementing advanced techniques in hydroponic smart greenhouse horticulture. Countries such as The Netherlands, Spain, and France have large areas under greenhouse cultivation. However, in The Netherlands, growers mostly cultivate their plants in simple tunnel-like greenhouses without the use of climate control technologies. Hydroponics has flourished in Scandinavian countries where traditional agriculture is nearly impossible during the winter season.

The worldwide market for Hydroponics is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
