According to our (Global Info Research) latest study, the global Hydroponics Technologies market size was valued at USD 27490 million in 2023 and is forecast to a readjusted size of USD 37480 million by 2030 with a CAGR of 4.5% during review period.

The global hydroponics technologies market consists of technologies used for growing plants without the use of soil. Environment and climate control systems, grow lights, farm management systems, and material handling systems are various types of technologies that have been considered in this report.

The need for reduction in soil and water pollution is one of the major factors driving the global hydroponics technologies market. In land farming, the chemicals such as fertilizers, pesticides, and insecticides are used to increase the yield rates substantially. This causes soil and water pollution. The chemicals such as pesticides accumulate in soil and alter microbial processes, increasing the plants' uptake of chemicals. This leads to higher toxicity in plants, which can affect soil organisms, animals, and humans that consume such plants.
