According to our (Global Info Research) latest study, the global Hydroprocessed Esters and Fatty Acids (HEFA) market size was valued at USD 13620 million in 2022 and is forecast to a readjusted size of USD 37140 million by 2029 with a CAGR of 15.4% during review period.

HEFA (Hydroprocessed Esters and Fatty Acids), also called HVO (Hydrotreated Vegetable Oil), is a renewable diesel fuel that can be produced from a wide array of vegetable oils and fats. The term HEFA or HVO is used collectively for these biogenic hydrocarbon-based renewable biofuels. HVO is free of aromatics and sulfur and has a high cetane number. It is a so-called drop-in fuel, meaning that it is chemically equivalent to fossil diesel fuel and can be used in existing diesel engines without technical blend walls. One challenge that the production of HVO is facing is to find enough suitable and sustainable feedstock.
