Abstracts

The global Hydroprocessing Catalysts (HPC) market size is expected to reach \$ 2661 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

Hydrogenation catalyst is a type of catalyst that is to treat with hydrogen – is a chemical reaction between molecular hydrogen (H₂) and another compound or element, usually in the presence of a catalyst such as nickel, palladium or platinum. The process is commonly employed to reduce or saturate organic compounds. Hydrogenation typically constitutes the addition of pairs of hydrogen atoms to a molecule, often an alkene. Catalysts are required for the reaction to be usable; non-catalytic hydrogenation takes place only at very high temperatures. Hydrogenation reduces double and triple bonds in hydrocarbons.

Global key producers of hydrogenation catalysts (HPC) include Advanced Refining Technologies (ART), Albemarle, Shell Catalysts & Technologies, Haldor Topsoe, and others. The top three producers together hold 55% of the market share.

In terms of product categories, hydrotreating holds the main market with 78% market share. In terms of applications, diesel hydrotreat is the number one application with 27% market share.

This report studies the global Hydroprocessing Catalysts (HPC) production, demand, key manufacturers, and key regions.
