According to our (Global Info Research) latest study, the global Hydroprocessing Catalysts (HPC) market size was valued at US\$ 2004 million in 2024 and is forecast to a readjusted size of USD 2573 million by 2031 with a CAGR of 3.7% during review period.

Hydrogenation catalyst is a type of catalyst that is to treat with hydrogen – is a chemical reaction between molecular hydrogen (H₂) and another compound or element, usually in the presence of a catalyst such as nickel, palladium or platinum. The process is commonly employed to reduce or saturate organic compounds. Hydrogenation typically constitutes the addition of pairs of hydrogen atoms to a molecule, often an alkene. Catalysts are required for the reaction to be usable; non-catalytic hydrogenation takes place only at very high temperatures. Hydrogenation reduces double and triple bonds in hydrocarbons.

Global key producers of hydrogenation catalysts (HPC) include Advanced Refining Technologies (ART), Albemarle, Shell Catalysts & Technologies, Haldor Topsoe, and others. The top three producers together hold 55% of the market share.

In terms of product categories, hydrotreating holds the main market with 78% market share. In terms of applications, diesel hydrotreat is the number one application with 27% market share.
