Hydrostatic pressure testing is a method of testing the integrity and strength of pressure vessels, pipelines, and other components that are designed to hold liquids or gases under pressure. It is a non-destructive testing method that involves filling the component with water and pressurizing it to a predetermined level. During hydrostatic pressure testing, the component is inspected for leaks or other defects under pressure. The pressure is typically maintained for a period of time, and the component is visually inspected for any signs of deformation, leaks, or other issues. Hydrostatic pressure testing is used in a variety of industries, including oil and gas, chemical processing, and power generation, to ensure the safety and reliability of pressure-containing components.
