Hydroxymethane is composed of one methyl group and one hydroxyl group. At room temperature, Hydroxymethane is a colorless, volatile, and flammable liquid. It has strong polarity and good solubility, making it one of the basic organic chemical raw materials and an important energy chemical.

Hydroxymethane is mainly produced through routes using natural gas, coal, coke oven gas, biomass, and carbon dioxide hydrogenation. Among these, traditional Hydroxymethane production mainly uses natural gas or coal as raw materials. These

feedstocks are first converted into synthesis gas, which is then catalytically synthesized into the final product.

In recent years, with the development of low-carbon fuels and green chemicals, green Hydroxymethane produced from biomass, green hydrogen, and captured carbon dioxide has gradually attracted attention.

Hydroxymethane is widely used in the production of formaldehyde, acetic acid, methyl tert-butyl ether, dimethyl ether, Hydroxymethane-to-olefins, biodiesel, methylamine, chloromethane, methyl methacrylate, and other chemical products. It can also be used as a fuel, marine fuel, fuel cell fuel, and gasoline blending component.
