Abstracts

Hyper-converged infrastructure (HCI) is a software-defined IT infrastructure that virtualizes all of the elements of conventional "hardware-defined" systems. HCI includes, at a minimum, virtualized computing (a hypervisor), a virtualised SAN (software-defined storage) and virtualized networking (software-defined networking). HCI typically runs on commercial off-the-shelf (COTS) servers.

Scope of the Report:

This report studies the Hyper-Converged Infrastructure market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Hyper-Converged Infrastructure market by product type and applications/end industries. The APAC region is expected to play a key role in the hyper-converged infrastructure market and grow at the highest rate during the forecast period. Rising awareness of data management through common interface at reduced total cost of ownership, growing focus toward VDI, server virtualization, and popularity of using infrastructure-as-a-service (IaaS) solutions are the prime factors driving the HCI systems market in this part of the world.
