Abstracts

According to our (Global Info Research) latest study, the global Hyper-Converged Infrastructure market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Hyper-converged infrastructure (HCI) is a software-defined IT infrastructure that virtualizes all of the elements of conventional "hardware-defined" systems. HCI includes, at a minimum, virtualized computing (a hypervisor), a virtualised SAN (software-defined storage) and virtualized networking (software-defined networking). HCI typically runs on commercial off-the-shelf (COTS) servers.

The APAC region is expected to play a key role in the hyper-converged infrastructure market and grow at the highest rate during the forecast period. Rising awareness of data management through common interface at reduced total cost of ownership, growing focus toward VDI, server virtualization, and popularity of using infrastructure-as-a-service (IaaS) solutions are the prime factors driving the HCI systems market in this part of the world.

The Global Info Research report includes an overview of the development of the Hyper-Converged Infrastructure industry chain, the market status of Financial Institutions (VMware, KVM), Healthcare (VMware, KVM), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Hyper-Converged Infrastructure.
