## **Abstracts**

Hyperconverged infrastructure (HCI) is a category of scale-out software-integrated infrastructure that applies a modular approach to compute, network and storage on standard hardware, leveraging distributed, horizontal building blocks under unified management. Hyperconverged infrastructure vendors either build their own appliances using common, off-the-shelf infrastructure (hardware, virtualization, operating system), or they engage with systems vendors that package the hyperconverged infrastructure vendor's software stack as an appliance. Alternatively, HCI vendors sell their software direct to end users, or through resellers and integrators for use as part of a reference architecture, or on an HCI-as-a-service basis, either on-premises or in a public cloud.

### **SCOPE OF THE REPORT:**
