Abstracts

The global Hyperimmune Globulin Product market size is expected to reach \$ 2866.8 million by 2029, rising at a market growth of 5.9% CAGR during the forecast period (2023-2029).

Hyperimmune globulin is similar to intravenous immunoglobulin (IVIG) except that it is prepared from the plasma of donors with high titers of antibody against a specific organism or antigen. Some agents against which hyperimmune globulins are available include hepatitis B, rabies, tetanus toxin, varicella-zoster, etc. Administration of hyperimmune globulin provides 'passive' immunity to the patient against an agent. This is in contrast to vaccines that provide 'active' immunity. However, vaccines take much longer to achieve that purpose while hyperimmune globulin provides instant 'passive' short-lived immunity. Hyperimmune globulin may have serious side effects, thus usage is taken very seriously.

This report studies the global Hyperimmune Globulin Product production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Hyperimmune Globulin Product, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
